

Cloud Computing: Explained

Cloud computing is a general term for the delivery of hosted services over the Internet. M-Tech's cloud desktop enables you to access your applications and data from anywhere there is an internet connection, giving ultimate flexibility. Servers and data live in the cloud so there's no need to store anything on-site.

mtech.cloud

We have architected and deployed our own Cloud, which runs on premium Nutanix, VMware and Citrix infrastructure, the internationally recognised vendors of choice for the world's most advanced cloud infrastructure.

The infrastructure behind our mtech.cloud

Benefits of The Cloud

> Predictable Budgeting

Cloud desktop is delivered as a monthly subscription model; there are no CapEx, upfront costs involved. This means there's no longer a need to invest in your own servers, freeing up floor space and reducing power and cooling costs.

> Fully Managed

To ensure your IT experience is seamless, we fully manage it for you. You can be confident in the knowledge that your software upgrades, anti-virus protection, firewall and backup are all kept up to date and monitored. As and when you need to add more users we'll take care of this for you, assigning access to the appropriate employees. As your business scales we'll simply scale your cloud provision to match.

> Ultimate Flexibility

In the event that employees are unable to come in to the office but still able to work they can access the cloud and therefore all their data via any PC, tablet or laptop; it's as simple as visiting a webpage and logging in.

- > No on-site server hardware
- > Greatly **reduced** technical support overhead
- > The **latest version** of all OS and Office software
- > Near instant **disaster recovery**
- > **Cutting edge** flexible and agile working platform
- > **Highly available** datacentre environment with N+1 features
- > **Repurpose** existing desktop hardware
- > **Cost effective** new desktop hardware

How do I Move to The Cloud?

Moving to the Cloud couldn't be easier, M-Tech will come in and remove your legacy equipment, leaving just thin clients and peripherals where applicable. If your existing PCs are in a good condition we will convert them into thin clients using the IGEL Universal Desktop Converter. There's no more to it than that; log in and begin your day.
